Dear Authors and Readers:

*Natural Sciences Education (NSE)* is published by the American Society of Agronomy, along with 11 cooperating societies that consider NSE their primary source for education articles: Agricultural & Applied Economics Association, American Association for Agricultural Education, American Institute of Biological Sciences, American Phytopathological Society, American Society for Horticultural Science, American Society of Animal Science, American Society of Plant Biologists, Crop Science Society of America, Ecological Society of America, Entomological Society of America, and Soil Science Society of America.

NSE covers all disciplines in the natural sciences, natural resources, animal science, and agriculture. Educators in extension, universities, industry, administration, and grades K–12 share teaching techniques, concepts, and ideas. Written by and for educators, articles published include research, notes, case studies, software, letters, editorials, newsfeatures, profiles, and media received. Special sections of the journal emphasize K–12 education, undergraduate education, and graduate education. The web address for general information about NSE, for downloading published papers, and where manuscripts can be submitted for publication consideration is <https://dl.sciencesocieties.org/publications/nse>.

A number of times each year we are asked why NSE does not have an impact factor. NSE is not eligible for an impact factor due to its non-technical content. In reality, impact factors are just one way to measure a journal's importance. Other significant measures include the influence it has on education policy, how widely its papers are distributed and read, and the overall number of times a paper is cited by other researchers, even beyond the two-year period used to calculate an impact factor. For educators who have a university appointment with a large teaching assignment, publishing in NSE clearly indicates study and research in the pedagogy of education.

Why should you publish your research in NSE?

- Articles in NSE are written by people, like you, who are the world's top natural sciences educators.
- Sharing your experience/creativity with others is important to maintain high-quality education in a very important area.
- Readers benefit from interchange of teaching ideas on lab exercises, case studies, new technologies, etc.
- You will support a not-for-profit scientific Society that is rooted in the scientific community.
- The editorial board is comprised of leading experts in the field.
- There are no page charges, but you have the option to make your article open access for a fee.

Other important facts about NSE included the following:

- Each submission undergoes a rigorous, timely review by at least two scientists/educators.
- The NSE acceptance rate averages 65% over the last three years.
- Articles are usually posted to the website approximately one week after acceptance.
- The journal is available continuously online in html and PDF formats.
- The publication reaches scientists/educators and K–16+ teachers.
- The journal is indexed by ERIC ([www.eric.ed.gov](http://www.eric.ed.gov)) – an online digital library of education research and information.  
ERIC is sponsored by the Institute of Education Sciences (IES) of the U.S. Department of Education.
- Electronic activity generated by the NSE website in 2018 averaged more than 15,600 full-text downloads.

If you would need a letter from me for a promotion and tenure document stating that NSE is a peer reviewed, highly cited education journal, I would be happy to provide such a letter.

I look forward to your involvement with NSE and to your contributed manuscript for publication consideration in NSE. You have something to share that can benefit others.

Sincerely,

Daniel W. Sweeney
